

Keyes Fibre Corporation Implements Mainsaver Software

San Diego, CA –June 20, 2016: For over 50 years, Keyes Fibre Corporation (*pronounced Kise*) has been producing molded fibre products from recycled paper for the fruit, wine and other industries. Many people are familiar with the blue trays that keep apples and pears from getting bruised while in transit to the local markets. As this company continues to expand, the need for Enterprise Asset Management software led them to select Mainsaver.

All of the molding machines and ancillary systems have been setup under the Mainsaver asset hierarchy which allows maintenance personnel to analyze machine history, maintenance costs and spare parts at any level in the hierarchy. Mainsaver will be used for corrective and preventive work orders as well as management of thousands of spare parts.

Plant management has several key goals for Mainsaver including better management of lubrication routes and the ability to plan the work for a day before the day begins. Preventive maintenance is generated weekly and corrective work orders are assigned to skilled trades as they originate from production personnel. One benefit which was a key to the selection of Mainsaver was easy exchange of data with legacy accounting and manufacturing execution systems.

Mainsaver is providing software and implementation services including training and conversion of any pertinent data in order to reduce manual data entry.

The Mainsaver system has a rich tradition of successful implementations in over 100 sites dedicated to the sustainability of the Earth's natural resources. This includes wind energy, plastics recycling, paper products and electricity from refuse.

About Keyes Fibre Corporation

Keyes Fibre Produces molded fiber trays for packaging and shipping apples, avocados, eggs and wine bottles. Ours is the largest molded fiber plant on the West Coast, located in the heart of North America's largest apple and pear growing regions.

Martin L. Keyes was a proficient inventor in the late 1800s, who persevered through years of trial and error to develop the first paper plate molding machine. Fueled by a vision to reclaim waste wood chips and turn them into a useful product, he established Keyes Fibre in 1903. It has grown into one of the world's largest producers of molded fiber fruit and vegetable packaging.

About Mainsaver

Mainsaver offers a complete Enterprise Asset Management Solution with a robust Computerized Maintenance Management System (CMMS) at its core. As one of the industry's foremost established CMMS suppliers, Mainsaver provides solid software applications, trusted consulting services, and comprehensive customer support to its clients. Our solutions are designed to provide a maximum return on investment, whether installed as a standalone application, or as an "end to end" solution interfaced to any of today's popular ERP, MRP or financial packages.
